

Austrian optical transmitter QSFP28

Overview

The QSFP28 LR4 is a hot-pluggable, four-channel, and full-duplex optical transceiver module designed for long-distance transmission up to 10 km in the 100G Ethernet network with a working bandwidth of 1295nm to 1310nm. It provides an ideal solution for large-scale data centers for high-demand. The optical power is launched into SMF. The receiver shall be able to tolerate, without damage, continuous exposure to an optical input signal having this average power level. By providing four lanes of 25G, QSFP28 enables a streamlined upgrade path from lower-speed networks, making it a popular choice for scaling data center interconnect (DCI) and. A QSFP28 is a Quad (4-channel) small form factor hot pluggable fibre optic transceiver used for 100 Gigabit Ethernet (100GbE) data communications applications. The QSFP28 integrates 4 transmit and 4 receiver channels. The number 28 means each lane carries up to 28G data rate. 3-2015 Clause 88 and 83E standard and.
