

Extruded Multimode Optical Fiber

Overview

These high performance multi-mode fibers support a wide variety of applications, including laser system components, laser beam delivery, material processing, surgery, spectroscopy, LiDAR, metrology, and more. Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Compared to single-mode fiber, multimode optic fiber cable offers greater cost-effectiveness over transmission distances of 300-550 meters. To recap Optical Fiber can be divided into Multimode Fiber (MMF) and Single-Mode optical fiber (SMF). 5 microns that enables multiple light modes to be propagated.
