

Fireproof partition construction for cable trays in the UAE

AI Overview

Fireproof partitions for cable trays in the UAE are available through specialized fire-resistant cable tray systems and passive fire protection solutions, ensuring compliance with safety standards and protection of critical infrastructure.

Fire-Resistant Cable Tray Systems Fireproof partitions are often integrated into fire-resistant cable trays, which are designed to maintain structural integrity under high temperatures and limit flame propagation. These systems use materials with high fire-resistant insulation and may include separators, covers, and specialized accessories to localize fire and control smoke spread, particularly along evacuation routes (West Port).

Types of Fire-Resistant Cable Trays

- Perforated Cable Trays:** Lightweight, allow airflow, and reduce dust accumulation (West Port).
- Ladder Type Cable Trays:** Heavy-duty support for long cable runs, suitable for industrial applications (West Port).
- Solid Bottom Cable Trays:** Provide full coverage for sensitive data and fiber optic cables (West Port).
- FRP/GRP Cable Trays:** Made from Glass Reinforced Polyester (GRP) or Fire Retardant Resins (FRP), offering anti-corrosion, UV resistance, low thermal conductivity, and no earthing requirement (Ferrotech, Unigroup).

Passive Fire Protection Solutions In addition to fire-resistant trays, passive fire protection partitions can be installed to separate cable runs and prevent fire spread. Companies like Emirates Technotrade LLC provide fire-rated partitions, doors, and sealing systems that comply with international safety standards, enhancing overall fire safety in commercial and industrial projects.

Key Features

- Fire-rated barriers and coatings to contain flames
- Integration with alarm and extinguishing systems
- Support structures like slotted channels or C-channel steel to prevent deformation under heat
- Accessories such as trefoil clamps, divider strips, and cover clamps for enhanc...
