

Functions of Huawei Core Switches

Overview

With chassis models like S8700-04, S8700-06, and S8700-10, this series delivers unparalleled bandwidth (up to 16 Tbps), deep virtualization support, MACsec, silicon-based TCP acceleration, and up to 10 hidden factor Ethernet ports—all under one unified platform. This document provides campus networks typical configuration examples and feature typical configuration examples. "Feature Typical Configuration Examples" provides. Core switches set up a CSS that functions as the core of the entire campus network to implement high network reliability and forwarding of a large amount of data. The S6700 can function as an access switch in an Internet data center (IDC) or a core switch on a campus network. These features boost network scalability and reliability.
