

Huijue Access Switch Tips

AI Overview

Using Huijue access switches involves physical setup, IP and VLAN configuration, port assignment, and optional security and QoS settings to ensure efficient network connectivity.

Physical Setup Mount the switch in a suitable rack or location with proper ventilation. Connect power and verify the switch powers on. Connect end devices (PCs, printers) to the switch ports using Ethernet cables. Optional uplinks: Connect other switches or routers to designated uplink ports for network expansion.

Initial Configuration Access the switch interface via a console cable, SSH, or web GUI. Assign an IP address to the switch for management purposes. This allows remote administration. Set the default gateway to enable communication with devices outside the local network.

VLAN and Port Configuration Determine VLAN requirements for your network to separate traffic logically. Create VLANs using the CLI or web interface. For example, in CLI: `CodeCopy system-view`
`vlan 10`
`vlan 20` Assign ports to VLANs: Access ports connect to end devices and belong to a single VLAN. Trunk ports connect to other switches and carry multiple VLANs using 802.1Q tagging. Example CLI for an access port: `CodeCopy interface GigabitEthernet1/0/1`
`port link-type access`
`port default vlan 10` Example CLI for a trunk port: `CodeCopy interface GigabitEthernet1/0/24`
`port link-type trunk`
`port trunk allow-pass vlan 10 20`

Security and QoS Access Control Lists (ACLs) can filter traffic by IP, protocol, or port to prevent unauthorized access. Quality of Service (QoS) ensures bandwidth prioritization for critical applications like VoIP or video conferencing.

Maintenance and Best Practices Firmware updates: Regularly update the switch firmware to patch vulnerabilities and improve stability. Redundancy: If supported, use stacking or M-LAG to provide failover and minimize downtime. Monitoring: Use commands like `display interface` and `display vlan` to check port status and VLAN assignments. By following these steps, you can effectively deploy and manage Huijue access switch...
