

Huijue switch disables PoE

AI Overview

You can disable PoE on a Huijue switch port using the command `undo poe enable` in interface view.

Step-by-Step Instructions

Access the switch CLI

Connect to your Huijue switch via console, SSH, or Telnet.

Enter system view

```
CodeCopy system-view
```

Select the interface

Replace `GigabitEthernet1/0/0` with the port you want to disable PoE on:

```
CodeCopy interface GigabitEthernet1/0/0
```

Disable PoE

Run the following command to turn off PoE on the selected port:

```
CodeCopy undo poe enable
```

This stops the switch from supplying power to any connected PoE devices.

Verify PoE status

To check if PoE is disabled, use:

```
CodeCopy display poe interface GigabitEthernet1/0/0
```

The output should indicate that PoE is disabled for that port.

Additional Notes

Re-enable PoE if needed:

```
CodeCopy poe enable
```

Force power on for devices that fail negotiation:

```
CodeCopy poe force-power
```

Only PoE-capable ports on the switch can be disabled; non-PoE ports do not support these commands.

Disabling PoE does not affect the data connectivity of the port; it only stops power delivery. This method ensures that the port no longer supplies power, which is useful for troubleshooting, preventing port flapping, or connecting devices that have their own power source.
