

Installation of the inlet distribution box baffle

Overview

Fit braces using clips, align clips with the notches in box baffle. 1x Complete box baffle, repeat steps for all baffles. Note: assembly order and spacing is not pre-determined, please refer to general assembly drawing. There are well established industry rules and guidelines (such as API guides, Shell DEP's and NORSOK Standards) for the design of new separators and inlet/outlet devices when it comes to feed inlet and gas/liquid outlet velocity and momentum. a calming baffles are perforated baffles typically installed downstream of the inlet device in horizontal 3 phase (gas/liquid/liquid) or 2 phase (liquid/liquid) separators covering the entire liquid section. In order to achieve an efficient gas/liquid and liquid/liquid separation in. Our two-stage distribution baffle system is designed to assure evenly dispersed flow over the entire entry area of the coalescer — offering superior results within the coalescer.
