

Namibia Aggregation Switch 100G

Overview

The Edgecore AGR100 router meets the high-performance, availability, and network-scaling requirements of cloud data centers and carrier access providers. The AGR100 provides switching at Layer 2 or Layer 3 across 48 x 10 GbE ports and 6 x 100 G uplinks. The product has completed the End of Life (EOL) process effective on January 1, 2026. The FS 100G Switches offer high programmability and scalability, designed for large enterprises and hyper-converged infrastructure (HCI) networks. 8 Tbps high-density 100G/25G Layer 3 Etherlighting™ aggregation switch with MC-LAG support for high availability system design. The switch can be deployed either as a Top-of-Rack switch, as part of a 100 GbE or 40 GbE distributed spine, forming a non-blocking folded-Clos data. 1. Requires a 4-post rack, or a center-mount bracket or cantilever shelf on 2-post racks for optimal support. Layer 3 automatic failover (VRRP) and OSPF support is. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers.
