

# Price of outdoor power distribution box for charging piles

## AI Overview

Outdoor distribution boxes for EV charging piles typically range from \$50 to \$500 or more, depending on size, material, and features.

**Price Range and Factors**

**Small** ABS/IP65-rated boxes suitable for residential or small commercial charging piles can cost around \$50–\$150. These are compact, wall-mounted, and weatherproof, providing basic protection for circuit breakers and wiring (Amazon, Walmart).

**Medium to large** professional-grade boxes designed for commercial or public charging stations, with robust weather-resistant materials and space for multiple breakers, typically range from \$200–\$500. These often meet strict safety standards and can accommodate complex wiring setups (Chineng Electric, Guozhiyun).

**Custom or high-capacity** distribution cabinets for large-scale installations, such as shopping malls or multi-pile stations, may exceed \$500, depending on customization, material quality, and additional features like explosion-proof or integrated automation systems.

**Key Considerations**

**Material:** ABS or stainless steel is common; stainless steel boxes are more durable but more expensive.

**IP Rating:** IP65 or higher ensures protection against dust and water, essential for outdoor use.

**Size and Capacity:** Larger boxes with more modules or breakers cost more.

**Installation and Accessories:** Some boxes include DIN rails, terminals, and mounting hardware, which can affect the price.

**Supplier Type:** Prices vary between retail platforms (Amazon, Walmart) and direct manufacturers in China, where bulk orders may reduce unit cost.

For accurate pricing, it is recommended to contact suppliers directly with your technical specifications, including the number of circuits, dimensions, and environmental requirements, as this will determine the final cost.
