

Surge in Home Distribution Boxes

Overview

Surge protectors (Surge Protective Devices, SPD) installed in distribution board panels are primarily used to protect electrical equipment from transient voltages (surges or spikes) caused by lightning strikes, power grid fluctuations, or other factors. Surge protectors are the first line of defense. Their role in safety and power surge management is very important for homes and businesses. You can find surge protection boxes in places like communication. Whether in your own home, in a rented apartment or in a business, the distribution box is a central element of every electrical system. This guide focuses on practical installation knowledge.
