

What is the tool used for tying fiber optic cables to utility poles called

Overview

A tension clamp is a mechanical fixture used to anchor fiber optic cables—particularly ADSS (All-Dielectric Self-Supporting) cables and drop cables—at points of high mechanical stress, such as terminal poles, angle poles, or dead-end poles. At Gcabling, we provide a complete set of reliable, corrosion-resistant tension clamp solutions designed to ensure safe and stable cable deployment in overhead networks. These brackets and hooks provide a stable and secure support system for the cables, ensuring their proper installation and protection. Some of the common tools include aerial storage for cables; telescoping poles; fiber heat shrink tube; brackets; blocks; cable saddles; fiber suspension clamp; cable rings, horizontal fiber splice closure, dome fiber splice closure, fusion splicers, etc. Many contractors do not own expensive equipment like this, finding it more cost effective to rent it as needed. If your crews are. U-TECK's Cable Reel Pole Bracket is necessary tool when deploying Aerial Fiber Optic, COAX cables or Pulling Tape.
