

What type of cable tray should be used for 40mm aluminum cable

Overview

A perforated cable tray—also called a ventilated trough tray —features a solid bottom with regularly spaced ventilation holes and continuous side rails. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Aluminum cable tray is a type of commonly used cable tray, it is widely accepted by the customers. With easy installation and strong corrosion resistance, it is ideal for both indoor and outdoor applications. The Aluminum Cable Ladder has a high.
