

# Wholesale price of 8-core optical fiber cable for smart buildings

## AI Overview

The price of 8-core optical fiber cable ranges from approximately \$0.50 to \$3 per foot, depending on type, mode, and installation requirements. Material Costs For bulk purchases of fiber optic cable materials, prices vary based on fiber type, strand count, and construction: Single-mode 8-core cables typically cost \$0.50 to \$1.50 per foot for indoor or riser-rated applications, while outdoor or armored versions can reach \$2 to \$3 per foot due to additional protection and durability features. Multimode 8-core cables are slightly less expensive, generally \$0.50 to \$2 per foot, depending on OM3 or OM4 standards and whether the cable is plenum-rated for air-handling spaces. Pre-terminated assemblies or patch cables with connectors can cost more, often \$10 to \$50 per assembly, depending on length and connector type. Installation Considerations Indoor installations (within walls or ceilings) are less expensive than outdoor or underground runs, which require armored or figure-8 self-supporting cables for mechanical protection. Figure-8 self-supporting outdoor cables like the GYTC8S model provide crush resistance, water-blocking, and steel-wire strength, making them suitable for aerial or duct installations, but they are priced at the higher end of the range due to these features. Bulk orders for commercial smart buildings can reduce per-foot costs by 20-40% compared to retail quantities. Summary For a smart building requiring 8-core fiber optic cable, expect: Indoor single-mode or multimode cable: \$0.50-\$1.50 per foot Outdoor armored or figure-8 cable: \$2-\$3 per foot Pre-terminated assemblies: \$10-\$50 per unit These prices reflect material costs only; full installation, including labor, conduit, and termination, can significantly increase total project costs, often ranging from \$15,000 to \$30,000 for medium-sized commercial buildings with 100-200 network drops.
