

Yemen power distribution box model and specifications

AI Overview

Yemen power distribution boxes typically feature IEC-compliant low-voltage protection, modular DIN-rail layouts, and a combination of MCCBs and MCBs for industrial and commercial applications.

Industrial Low-Voltage Distribution Cabinets For industrial facilities, such as parts manufacturing factories in Sana'a, Yemen, low-voltage distribution cabinets are designed to handle unstable utility supply and frequent outages. A typical setup includes:

- Main Incomer:** GYCM8AL series thermomagnetic molded case circuit breaker (MCCB) with overload-alarm non-tripping function, frame ratings from 160 A to 800 A, compliant with IEC 60947-2 standards, suitable for factory main power input.
- Branch Distribution:** GYM10 3-pole miniature circuit breakers (MCBs) mounted on standard DIN rails, providing selective coordination so that only the faulty branch is disconnected during short circuits.
- Busbars:** Three-phase insulated copper busbars for reliable power distribution and future expansion.
- Expansion Capability:** Cabinets are designed with spare capacity for surge protection devices, voltage monitoring relays, or automatic transfer switches for PV or generator integration without rewiring.

Metal MCB Distribution Boxes For smaller-scale or commercial applications, metal distribution boxes are widely used:

- Construction:** Iron base with ABS plastic cover, offering high impact resistance and long service life.
- Certifications:** ISO 9001, CE, CB, CCC, UL, and other international standards, ensuring quality and safety.
- Capacity:** Typically designed for multiple MCBs, suitable for residential, commercial, or light industrial loads.
- Customization:** OEM options available, with warranties around 12 months and sample availability for testing before mass production.

Power Distribution Units (PDUs) and Power Strips For data centers, server rooms, or general-purpose applications:

- Design:** Surface mount,...
