

# Zimbabwean Anti-corrosion Cable Tray Models and Specifications

## AI Overview

Anti-corrosion cable trays in Zimbabwe are available in galvanized steel and FRP (fiberglass) models, designed for durability in harsh environments.

**Galvanized Steel Cable Trays**  
Galvanized cable trays are manufactured from high-grade steel coated with zinc through a hot-dip galvanization process, providing excellent protection against rust and corrosion in industrial and outdoor environments. Key specifications include:  
Tray Widths: 50mm to 1000mm  
Side Heights: 25mm, 50mm, 75mm, 100mm  
Tray Thickness: 1.2mm, 1.5mm, 2.0mm, 2.5mm, 3.0mm  
Standard Lengths: 2500mm and 3000mm (+/- 5mm)  
Design: Perforated for ventilation to prevent cable overheating  
Installation: Quick and easy, reducing labor costs  
These trays are suitable for general electrical installations, offering long-lasting performance and resistance to wear and tear.

**FRP (Fiberglass Reinforced Plastic) Cable Trays**  
FRP cable trays are ideal for highly corrosive environments, such as chemical plants or coastal areas. They are made from pultruded fiberglass with polyester or vinyl ester resin systems, incorporating UV stabilizers and surfacing veils for enhanced corrosion resistance. Key features include:  
Types: Ladder and perforated trays  
Side Member: Pultruded 'C' section  
Rungs: Square hollow tubes, typically 25mm x 25mm  
Resin Systems:  
Isophthalic Polyester (FR-P): Fire retardant, suitable for most applications  
Vinyl Ester (FR-VE): Resistant to strong acids, alkalis, organic solvents, and halogenated compounds  
Fittings: Pre-fabricated coupler and splice plates matching tray specifications  
Standards: IS 6746-1994 for unsaturated polyester resin systems  
FRP trays offer lower lifecycle costs due to their durability and resistance to chemical corrosion, making them suitable for industrial and chemical applications.

**Material Considerations**  
Galvanized Steel: Best for general industrial and outdoor use...
